The predominant allocation will be to high rated securities only. This will also mean that apart from usual interest rate and credit risk in any portfolio, the Liquidity risk management will also be a dominant requirement in this Scheme. In order to manage Liquidity risk, apart from maintaining the regulatory level of cash and cash equivalents, the endeavour will be to manage liquidity in line with overall macroeconomic and debt market scenario along with understanding of possible inflows and outflows from the Scheme. At its core, the INQUBE investment philosophy borrows from human nature and behavioral finance as a knowledge discipline.</p> <p>The maturity profile of debt instruments will be selected in accordance with the Fund Manager's view regarding market conditions, interest rate outlook, stability of rating and liquidity requirement. The fund management team will strive to maintain a consistent performance by maintaining a balance between safety, liquidity and returns aspects of various investments. Investment views/ decisions will consider parameters like prevailing interest rate scenario, quality of the security/instrument, maturity profile of the instrument, liquidity of the security, growth prospects of the company/ industry, and other factors in the opinion of the fund management team.</p> <p>The fund management team may deploy various quantitative tools, indicators, data analytics etc. in different combinations from time to time to develop/validate/reassess/analyze the investment decisions.</p>

Pending deployment of the funds in securities in terms of investment objective of the Scheme, the AMC may park the funds of the Scheme in short term deposits of the Scheduled Commercial Banks, subject to the guidelines issued by SEBI vide its circular dated April 16, 2007 and September 20, 2019, as may be amended from time to time.

**Short term defensive consideration:** When the Fund Manager/s believes market or economic conditions are unfavourable for investors, the scheme may invest up to 100% of its assets in a temporary defensive manner by holding all or a substantial portion of its assets in cash, cash equivalents or other high quality short-term investments. Temporary defensive investments generally may include permitted money market instruments, TREPS/reverse repo, etc. Such changes in the investment pattern will be for short term and defensive considerations only which would be rebalanced to the above asset allocations within 30 calendar days from the date of deviation and in accordance with SEBI circular dated March 04, 2021 and any other circulars issued there under, from time to time.

<p><b>Investment Strategy of the Scheme</b></p>	<p>To achieve its investment objective, the scheme will allocate funds to equity and equity-linked instruments across different market capitalizations, including large-cap, mid-cap, and small-cap companies. The definition of these company categories is based on SEBI circular no. SEBI/HO/IM/DF3/CIR/P/2017/114 dated October 6, 2017, and any subsequent amendments by SEBI. Currently, large-cap companies are ranked from the 1st to the 100th position, mid-cap companies from the 101st to the 250th position, and small-cap companies from the 251st position onwards, based on full market capitalization. The list of stocks will align with the one published by AMFI according to the mentioned circular, and it will be updated every six months.</p> <p>The fund manager will seek to invest in companies operating in sectors having large &amp; expanding opportunity with strong growth potential. Within the sector, the fund will prefer to build a portfolio around companies having competitive advantage to benefit from the underlying opportunity. The fund manager will also seek to balance between growth &amp; valuation while building the portfolio.</p> <p>However, the broad focus will be around selected sectors that are deemed to have growth potential, based on professional judgment. These sectors may be assessed on the basis of their growth prospects, valuations, and the Fund Manager's discretion over a medium to long term. Our investment process adheres to the INQUBE philosophy framework, considering key factors such as business fundamentals, management quality, and valuation.</p> <p>In bearish market conditions, the Fund Manager may allocate up to 35% of the portfolio to debt and money market instruments with an aim to preserve capital.</p> <p><b>Investment Philosophy &amp; Process:</b></p> <p>Change is a principal quality of our business environment. There are obviously some businesses that adapt to these changes and ride these mega trends; while some end up losing their market share or profits, failing to adapt to these changes. It is important to consider these mega trends in investing.</p> <p>Structural changes demand that the incumbent, dominant companies, or business ecosystems, prepare for them if they want to stay in control of their market positions. Challenger companies, or up-and-coming business ecosystems often capitalize on these changes to enter existing markets or establish new ones. These moves are reflected in constantly shifting profit pools. In this fund, it is our endeavour to invest in companies that benefit from these changes.</p> <p>Investing based on mega trends requires us to look across sector and market capitalisations and hence a flexicap allocation is best to take advantage of this strategy. We will identify companies that benefit from trends in the economy, sector, or industry. Strong tailwinds in the business help these companies with either higher or more sustainable growth over a longer term. We have identified some of the trends in the current environment that will impact the growth rates of many businesses in years to come. These structural changes can impact one or many sectors/industries. Some of these trends are listed below:</p> <ul style="list-style-type: none"> <li>• India's demographic dividend – young population and rising middle income group</li> <li>• Resurgence in Indian manufacturing</li> <li>• Growth in credit and Easy access to finance</li> <li>• Increase in infrastructure spend and rise of capital expenditure in the economy</li> <li>• Formalisation of many market segments</li> <li>• Rapid Urbanisation</li> <li>• Focus on health and wellness (especially after Covid19)</li> <li>• Digital, technology and ecommerce</li> <li>• Green consciousness and sustainability</li> </ul> <p>These trends together have a significant impact on the growth of companies across sectors and marketcaps. Depending on how businesses react to these trends, determines how much market share or profits share of the industry, they will be able to gain and retain.</p> <p>Within these trends, there may also be sub-trends that may be quite strong. For example, rising household incomes combined with digital transformation can impact how consumers spend and what they spend on.</p> <p>The strategy is to create a portfolio of companies in different industries and different market caps who have the business model to benefit from the structural changes in their respective sectors.</p> <p>Considering the inherent characteristics of the Scheme, equity positions would have to built-up gradually and also sold off gradually. This would necessarily entail having large cash position before the portfolio is fully invested and during periods when equity positions are being sold off to book profits/losses or to meet redemption needs. Investors may note that securities which endeavor to provide higher returns typically, display higher volatility. Accordingly, the investment portfolio of the Scheme would reflect moderate to high volatility in its equity and equity related investments and low to moderate volatility in its debt and money market investments.</p> <p><b>INQUBE Investment Philosophy</b></p> <p>The INQUBE fund management philosophy is based on first principles understanding of the market dynamics. The process at its core emanates from the studied realisation that fund alpha is an outcome of three edges namely the Information edge, the Quantitative edge and the Behavioural edge of the investment team. At its core, the INQUBE investment philosophy borrows from human nature and behavioral finance as a knowledge discipline.</p> <p>To realise the edge at the stock ideas hunting stage, the process shall involve a simultaneous application of top-down and bottom-up research to identify potential investments. It also involves evaluating business cycles and trends, such as momentum and trend reversal patterns, in order to identify potential investment opportunities and the stage of growth such potential ideas may be at.</p> <p>At the ideas analysis stage, the process involves analysing the business, management and valuation to guide the stock selection process. While undertaking the allocation decisions, the business shall be filtered on account of its size, quality, valuation, growth outlook, and risk; to measure and structure the allocation.</p> <p>The AMC/Sponsors/Trustee do not guarantee that the investment objective of the Scheme will be achieved. No guaranteed returns are being offered under the Scheme.</p>

The intent is to avoid double counting of exposure and not to take additional asset allocation with the use of derivative. If suitable arbitrage opportunities are not available in the opinion of the Investment manager, the Scheme may hedge the equity portfolio by using derivatives or may invest in short term debt / money market instruments.

(ii) The asset allocation as given under normal circumstances is indicative and may vary according to circumstances at the sole discretion of the Fund Manager. Short term defensive consideration: When the Fund Manager/s believes market or economic conditions are unfavourable for investors, the scheme may invest up to 100% of its assets in a temporary defensive manner by holding all or a substantial portion of its assets in cash, cash equivalents or other high quality short-term investments. Temporary defensive investments generally may include permitted money market instruments, TREPS/reverse repo, etc. Such changes in the investment pattern will be for short term and defensive considerations only which would be rebalanced to either of the above asset allocations within 30 calendar days from the date of deviation and in accordance with SEBI circular dated March 04, 2021 and any other circulars issued there under, from time to time.

<p><b>Investment Strategy of the Scheme</b></p>	<p>The Fund Manager will identify and take advantage of market neutral arbitrage opportunities by executing deals simultaneously in both markets. In compliance with SEBI guidelines, the Scheme will not engage in short selling in the cash market at any time.</p> <p>The debt component of the Scheme will be invested in debt securities and money market instruments, with the primary aim of generating income while minimizing interest rate risk.</p> <p>Some of the arbitrage strategies that may be employed by the fund manager include:</p> <p>Cash-Future Arbitrage: For example, let's say the price of XYZ stock in the spot market is Rs 100, while the price of the same stock in the futures market is Rs 105. After adjusting for taxes and other costs, the Scheme will buy the stock in the spot market for Rs 100 and simultaneously sell the same stock in the futures market for Rs 105, earning the cost of carry between the stock and its futures.</p> <p>Rolling over of the Futures Transaction: This strategy involves unwinding the short position in the current month's futures and simultaneously selling futures of the subsequent month, while holding onto the spot position. For example, if the fund manager anticipates a change in market conditions, they may choose to unwind their current month's futures position and roll it over to the subsequent month.</p> <p>Dividend Arbitrage: For example, prior to a dividend declaration, the stock futures/options market may provide a profitable opportunity. Typically, the stock price declines by the dividend amount when the stock goes ex-dividend. The fund manager may take advantage of this by buying the stock in the spot market and selling the same stock in the futures market.</p> <p>Buy-back Arbitrage: This strategy involves taking advantage of the price differential between the buy-back price and the traded price when a company announces a buy-back of its own shares. For example, if a company announces a buy-back at Rs 100 per share, while the current market price is Rs 95, its futures price is likely to be higher in anticipation of the buy back price. Here, the fund manager may choose to buy the stock at Rs 95 and sell its futures price at say Rs 100 to capture the high arbitrage opportunity.</p> <p>Nifty Spot-Nifty Futures: This strategy involves exploiting the difference in pricing between the Nifty and Nifty futures. For example, if the Nifty is currently at 20,000 and the Nifty futures are at 21,050, the fund manager may choose to buy the Nifty futures and sell the portfolio comprising of index stocks, earning the difference between the two.</p> <p>Buy Option: This strategy involves actively managing the options component to take advantage of market volatility. For example, if the fund manager believes that a stock's price will increase, they may choose to buy a call option on that stock.</p> <p>It's important to note that the above strategies are just examples and the fund manager may adopt other strategies as well, depending on market conditions and regulatory compliance. Additionally, the provision for trading in derivatives is an enabling provision and it is not binding on the Scheme to undertake trading on a day-to-day basis.</p> <p>Considering the inherent characteristics of the Scheme, equity positions would have to built-up gradually and also sold off gradually. This would necessarily entail having large cash position before the portfolio is fully invested and during periods when equity positions are being sold off to book profits/losses or to meet redemption needs. Investors may note that securities which endeavor to provide higher returns typically, display higher volatility. Accordingly, the investment portfolio of the Scheme would reflect moderate to high volatility in its equity and equity related investments and low to moderate volatility in its debt and money market investments.</p>

<p><b>Investment Strategy of the Scheme</b></p>	<p>Our primary equity strategy is to build a portfolio of high-growth companies which may have achieved reasonable scale or size. Our focus is primarily on identifying companies with robust business models, sustainable competitive advantages, and superior return ratios compared to their industry peers. Our investment process adheres to the INQUBE philosophy framework, considering key factors such as business fundamentals, management quality, and valuation.</p> <p>To minimize concentration risk, our fund has the flexibility to invest in companies across various market capitalizations, adopting a sector-agnostic approach. Additionally, we may explore arbitrage opportunities within the Indian equities market.</p> <p>In addition to equity investments, our scheme also allocates funds to debt securities and money market instruments. Investment strategy focuses on capturing term and credit spreads and maintaining a balance between safety, liquidity, and return aspects of various investments. Our investment approach combines a top-down perspective for assessing interest rate trends and sector allocation with a bottom-up approach for selecting individual securities and instruments. The fund management team will take an active view of interest rate movements by keeping a close watch on various parameters of the Indian economy, as well as developments in global markets. Investment views and decisions will be taken based on factors such as prevailing interest rate scenario, quality of the security/instrument, maturity profile, liquidity, growth prospects, and any other relevant factors in the opinion of the fund management team.</p> <p><b>Investment Philosophy &amp; Process:</b></p> <p>The fund's investment approach is rooted in the first principles thinking that the equities market (Nifty 50) is influenced by both fundamental and behavioural factors. Fundamental factors include economic variables (GDP growth, interest rates, inflation, industrial production, current account deficit etc) and corporate aggregates (revenue outlook, earnings outlook, balance-sheet strength etc). Behavioural factors, on the other hand, encompass elements such as investor sentiment, herd behaviour, underlying biases, and other similar considerations.</p> <p>To determine the fundamental value of the index (Nifty 50), our fund utilizes a comprehensive analysis of the fundamental factors at play. This intrinsic value is determined by factoring in future earnings expectations and ideal valuation range. The valuation expectation takes into account the market's willingness to pay a premium for growth, as well as dominant interest rates. Additionally, the valuation expectation also incorporates the valuations of businesses as a holding value of listed conglomerates.</p> <p>The intrinsic value of the Nifty 50 thus arrived at, serves as the foundation for the core allocation of unhedged equities within the fund. Additionally, our fund management team also simultaneously monitors behavioural elements prevalent in the market, utilizing an internally built composite indicator. This indicator is based on multiple factors which captures trends in different markets such as currency fluctuations, commodities trends, fixed income premiums of key securities, and prevailing liquidity momentum in the market.</p> <p>The sentiment indicator arrived at through this process provides a satellite allocation factor to the core equities allocation. Depending on the sentiment indicator, this satellite allocation may hover in a broad range from the core allocation for a given market condition. Our fund rebalances its portfolio on a month-on-month basis through this process. The unhedged equity portfolio construction of the fund is based on our proprietary INQUBE' investment philosophy which seeks to combine our Informational edge, the Quantitative edge and the Behavioural edge to generate competitive performance. It is worth noting, however, that while our fund manager may utilize this model as a navigation tool to guide investments, the final discretion and judgement to determine allocation percentages, intervals, and approach rests with the fund manager, in accordance with the investment objectives of the fund.</p> <p>Considering the inherent characteristics of the Scheme, equity positions would have to built-up gradually and also sold off gradually. This would necessarily entail having large cash position before the portfolio is fully invested and during periods when equity positions are being sold off to book profits/losses or to meet redemption needs. Investors may note that securities which endeavor to provide higher returns typically, display higher volatility. Accordingly, the investment portfolio of the Scheme would reflect moderate to high volatility in its equity and equity related investments and low to moderate volatility in its debt and money market investments.</p> <p><b>INQUBE Investment Philosophy</b></p> <p>The INQUBE fund management philosophy is based on first principles understanding of the market dynamics. The process at its core emanates from the studied realisation that fund alpha is an outcome of three edges namely the Information edge, the Quantitative edge and the Behavioural edge of the investment team. At its core, the INQUBE investment philosophy borrows from human nature and behavioral finance as a knowledge discipline.</p> <p>To realise the edge at the stock ideas hunting stage, the process shall involve a simultaneous application of top-down and bottom-up research to identify potential investments. It also involves evaluating business cycles and trends, such as momentum and trend reversal patterns, in order to identify potential investment opportunities and the stage of growth such potential ideas may be at.</p> <p>At the ideas analysis stage, the process involves analysing the business, management and valuation to guide the stock selection process. While undertaking the allocation decisions, the business shall be filtered on account of its size, quality, valuation, growth outlook, and risk; to measure and structure the allocation.</p> <p>The AMC/Sponsors/Trustee do not guarantee that the investment objective of the Scheme will be achieved. No guaranteed returns are being offered under the Scheme.</p>

<b>Investment Strategy of the Scheme</b>	<p>The scheme aims to generate long-term capital appreciation/income by predominantly investing in equity and equity-related securities of large-cap and mid-cap companies. The fund manager seeks to invest in companies having a distinct competitive advantage over its peers. Like a castle surrounded by a moat for protection against attack, a moat in business refers to a company's competitive advantage that makes it difficult for competitors to challenge its position in the market. Hence in investment parlance, this strategy is also known as Moat Investing. Additionally, the fund manager will also assess the company on the basis of its management's capability to protect their business's distinct advantage and enhance it (Expand the Moat). The portfolio will prefer businesses that have shown business strength and are available at or below fair valuations. The equity strategy will aim to build a portfolio of such strong companies in the current market environment while maintaining reasonable diversification. Our investment process adheres to the INQUBE philosophy framework, considering key factors such as business fundamentals, management quality, and valuation.</p> <p>Additionally, the scheme has the flexibility to invest up to 30% of its assets under management (AUM) in debt instruments and money market instruments. Investments in debt securities are guided by credit quality, liquidity, interest rates, and market outlook. The scheme may also invest in hybrid securities such as REITs and InvITs, subject to SEBI's stipulations.</p> <p>Subject to regulations and guidelines, the scheme may engage in stock lending activities. It can also invest in other schemes of mutual funds in accordance with the prevailing SEBI (MF) Regulations.</p> <p><b>Investment Philosophy and Process:</b></p> <p>The scheme may follow a blend of quality, growth and value style of investing and will follow a combination of top-down and bottom-up approach to stock-picking and choose companies across sectors.</p> <p>Considering the inherent characteristics of the Scheme, equity positions would have to built-up gradually and also sold off gradually. This would necessarily entail having large cash position before the portfolio is fully invested and during periods when equity positions are being sold off to book profits/losses or to meet redemption needs. Investors may note that securities which endeavor to provide higher returns typically, display higher volatility. Accordingly, the investment portfolio of the Scheme would reflect moderate to high volatility in its equity and equity related investments and low to moderate volatility in its debt and money market investments.</p> <p>The fund shall pursue its investment strategy within the contours of the inhouse proprietary fund management philosophy called 'INQUBE'.</p> <p><b>INQUBE Investment Philosophy:</b></p> <p>The <b>INQUBE</b> fund management philosophy is based on first principles understanding of the market dynamics. The process at its core emanates from the studied realisation that fund alpha is an outcome of three edges namely the <b>Information</b> edge, the <b>Quantitative</b> edge and the <b>Behavioural</b> edge of the investment team. At its core, the INQUBE investment philosophy borrows from human nature and behavioral finance as a knowledge discipline.</p> <p>To realise the edge at the stock ideas hunting stage, the process shall involve a simultaneous application of top-down and bottom-up research to identify potential investments. It also involves evaluating business cycles and trends, such as momentum and trend reversal patterns, in order to identify potential investment opportunities and the stage of growth such potential ideas may be at.</p> <p>At the ideas analysis stage, the process involves analysing the business, management and valuation to guide the stock selection process. Scheme Specific Risk Factors:

1. Risks associated with investing in equities:

- Investors may note that AMC/Fund Manager's investment decisions may not be always profitable, as actual market movements may be at variance with anticipated trends. Trading volumes, settlement periods and transfer procedures may restrict the liquidity of these investments. Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make intended securities purchases due to settlement problems could cause the Scheme to miss certain investment opportunities. Similarly, the inability to sell securities held in the Scheme portfolio would result at times, in potential losses to the Scheme, should there be a subsequent decline in the value of securities held in the Scheme portfolio.
- The value of the Scheme's investments may be affected generally by factors affecting securities markets, such as price and volume volatility in the capital markets, interest rates, currency exchange rates, changes in policies of the Government, taxation laws or any other appropriate authority policies and other political and economic developments which may have an adverse bearing on individual securities, a specific sector or all sectors including equity and debt markets. Consequently, the NAV of the Units of the Scheme may fluctuate and can go up or down.
- The Mutual Fund may not be able to sell securities, which can lead to temporary illiquidity. There are risks inherent in securities lending, including the risk of failure of the other party, in this case the approved intermediary to comply with the terms of the agreement. Such failure can result in a possible loss of rights to be collateral, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of corporate benefits accruing thereon.
- Investors may note that dividend is due only when declared and there is no assurance that a company (even though it may have a track record of payment of dividend in the past) may continue paying dividend in future. As such, the scheme is vulnerable to instances where investments in securities may not earn dividend or where lesser dividend is declared by a company in subsequent years in which investments are made by scheme. As the profitability of companies are likely to vary and have a material bearing on their ability to declare and pay dividend, the performance of the scheme may be adversely affected due to such factors.
- While securities that are listed on the stock exchange carry lower liquidity risk, the ability to sell these investments is limited by the overall trading volume on the stock exchanges. The liquidity of the Scheme's investments is inherently restricted by trading volumes in the securities in which it invests.
- Fund manager endeavors to generate returns based on certain past statistical trend. The performance of the scheme may get affected if there is a change in the said trend. There can be no assurance that such historical trends would continue.
- In case of abnormal circumstances, it will be difficult to complete the square off transaction due to liquidity being poor in stock futures/spot market. However, the scheme will aim to take exposure only into liquid stocks where there will be minimal risk to square off the transaction.
- Changes in Government policy in general and changes in tax benefits applicable to mutual funds may impact the returns to investors in the Scheme or business prospects of the Company in any particular sector.
- Investments in equity and equity related securities involve a certain degree of risk and Investors should not invest in the equity scheme unless they can afford to take the risk of losing their investment.

2. Risks associated with investing in fixed income:

- Market Risk:** The NAV of the scheme, to the extent invested in Debt and Money Market securities, will be affected by changes in the general level of interest rates. The NAV of the scheme is expected to increase from a fall in interest rates while it would be adversely affected by an increase in the level of interest rates.
- Liquidity Risk:** Money market securities, while fairly liquid, lack a well-developed secondary market, which may restrict the selling ability of the scheme and may lead to the scheme incurring losses till the security is finally sold. The liquidity of a bond may change, depending on market conditions leading to changes in the liquidity premium attached to the price of the bond. At the time of selling the security, the security can become illiquid, leading to loss in value of the portfolio.
- Price Risk:** Government securities where a fixed return is offered run price-risk like any other fixed income security. Generally, when interest rates rise, prices of fixed income securities fall and when interest rates drop, the prices increase. The extent of fall or rise in the prices is a function of the existing coupon, days to maturity and the increase or decrease in the level of interest rates. The new level of interest rate is determined by the rates at which government raises new money and/or the price levels at which the market is already dealing in existing securities. This risk is not unique to Government Securities. It exists for all fixed income securities. However, Government Securities are unique in the sense that their credit risk generally remains zero. Therefore, their prices are influenced only by movement in interest rates in the financial system.
- Settlement Risk:** The inability of the scheme to make intended securities purchases due to settlement problems could cause the scheme to miss certain investment opportunities. By the same rationale, the inability to sell securities held in the scheme's portfolio due to the extraneous factors that may impact liquidity would result, at times, in potential losses in case of a subsequent decline in the value of securities held in the scheme's portfolio.
- Regulatory Risk:** Changes in government policy in general and changes in tax benefits applicable to Mutual Funds may impact the returns to investors in the scheme.
- Reinvestment Risk:** This risk refers to the interest rate levels at which cash flows received from the securities in the scheme are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.
- Credit Risk:** Investments in Debt Securities are subject to the risk of an issuer's inability to meet interest and principal payments on its obligations and market perception of the creditworthiness of the issuer.
- Risks associated with investment in unlisted securities:** Subject to applicable Regulations, the scheme can invest in unlisted securities. These securities are subject to greater price fluctuations, less liquidity and greater risk than the listed securities. Except for any security of an associate or group company, the scheme has the power to invest in securities which are not listed on a stock exchange ("unlisted Securities") which in general are subject to greater price fluctuations, less liquidity and greater risk than those which are traded in the open market. Unlisted securities may lack a liquid secondary market and there can be no assurance that the Scheme will realise their investments in unlisted securities at a fair value.
- Different types of fixed income securities in which the scheme would invest as given in the Scheme Information Document carry different levels and types of risk. Accordingly, the scheme risk may increase or decrease depending upon its investment pattern. e.g. corporate bonds carry a higher level of risk than Government securities. Further even among corporate bonds, bonds, which are AAA rated, are comparatively less risky than bonds, which are AA rated. AA rated corporate bonds are comparatively less risky when compared with A rated corporate bonds.**
- The AMC may, considering the overall level of risk of the portfolio, invest in lower rated securities offering higher yields as well as zero coupon securities that offer attractive yields. This may increase the absolute level of risk of the portfolio.
- As zero coupon securities does not provide periodic interest payments to the holder of the security, these securities are more sensitive to changes in interest rates. Therefore, the interest rate risk of zero coupon securities is higher. The AMC may choose to invest in zero coupon securities that offer attractive yields. This may increase the risk of the portfolio.
- The scheme at times may receive large number of redemption requests leading to an asset-liability mismatch and therefore requiring the AMC to make a distress sale of the securities leading to realignment of the portfolio and consequently resulting in investment in lower yield instruments.
- Basis Risk:** Basis risk arises due to a difference in the price movement of the derivative vis-à-vis that of the security being hedged.
- Spread Risk:** In a floating rate security the coupon is expressed in terms of a spread or mark up over the benchmark rate. In the life of the security, this spread may move adversely leading to loss in value of the portfolio. The yield of the underlying benchmark might not change, but the spread of the security over the underlying benchmark might increase leading to loss in value of the security.
- Counterparty Risk:** This is the risk of failure of counterparty to a transaction to deliver securities against consideration received or to pay consideration against securities delivered, in full or in part or as per the agreed specification. There could be losses to the Scheme in case of a counterparty default.
- Duration Risk:** Duration risk refers to the movement in price of the underlying invested money market / debt instruments due to movement/change in interest rates over different durations of maturity of instruments. In a portfolio of debt assets, the duration risk is measured by the average duration of the portfolio. Duration, expressed in years, is used as a measure of the sensitivity of the fixed income instrument to a change in interest rates. Usually, individual duration of fixed income instruments in the portfolio is calculated and the portfolio duration is weighted average of such individual instrument duration. A longer portfolio duration is associated with greater price fluctuations. A rise in interest rates could normally lead to decrease in prices and generally negatively affects portfolios having longer duration vis-a-vis portfolios having shorter duration. A fall in interest rate generally benefits portfolio having longer duration. A longer duration portfolio is also generally associated with greater volatility vis-a-vis a shorter duration portfolio.
- Sovereign Risk:** Sovereign risk is the likelihood that a Government will default on its loan obligation by failing to meet its principal payments or interest. It comes in different forms and may result in losses to investors in addition to negative political consequences. The Central Government of a country is the issuer of the local currency in that country. The Government (Central / State) raises money to meet its capital and revenue expenditure by issuing debt or discounted securities. Since payment of interest and principal amount has a sovereign status implying no default, such securities are known as securities with sovereign credit. For domestic borrowers and lenders, the credit risk on such sovereign credit is minimal, even lower than a security with "AAA" rating and hence commands a yield, which is lower than a yield on "AAA" security.

## INSTRUCTIONS FOR COMMON APPLICATION FORM

### 1. DISTRIBUTOR INFORMATION

- Commission (if any) shall be paid directly by the investor to the AMFI registered Distributors based on the investors' assessment of various factors including the service rendered by the distributor.
- Please mention "DIRECT" in case the application is not routed through any distributor.
- Pursuant to SEBI circular dated September 13, 2012, mutual funds have created a unique identity number of the employee/ relationship manager/ sales person of the distributor interacting with the investor for the sale of mutual fund products, in addition to the AMFI Registration Number (ARN) of the distributor. This Employee Unique Identification Number is referred as "EUIIN". EUIIN aims to assist in tackling the problem of mis-selling even if the employee/relationship manager/sales person leaves the employment of the distributor or his/her sub broker. Quoting of EUIIN is mandatory in case of advisory transactions.
- Distributors are advised to ensure that the sub broker affixes his/her ARN code in the column "Sub broker ARN code" separately provided, in addition to the current practice of affixing the internal code issued by the main ARN holder in the "Sub broker code (as allotted by ARN holder)" column and the EUIIN of the Sales Person (if any) in the "EUIIN" column.
- Distributor are advised to ensure that they fill in the RIA/PMRN code, in case they are a Registered Investment Advisor / Portfolio Manager.
- Investors are requested to note that EUIIN is applicable for transactions such as Purchases, Switches, Registrations of SIP / STP and EUIIN is not applicable for transactions such as Installments under SIP/STP / SWP, Redemption, SWP Registration.
- Investors are requested to note that EUIIN is largely applicable to sales persons of non individual ARN holders only (whether acting in the capacity of the main distributor or sub broker).
